## **DEFINITIONS**

### **FIBER**

A thread-like body or filament, many times longer than its diameter. Paper pulps are composed of cellulose fibers, usually of vegetable origin, such as woods and grasses.

### **GROUNDWOOD PAPER**

Any paper that is made from a furnish containing a large percentage of mechanical pulp.

### **INTEGRATED MILL**

A paper mill that manufactures its own pulp.

### **NEWSPRINT**

A grade of paper made especially for use in the printing of newspapers. Newsprint is the most inexpensive paper available that will withstand printing and contains mostly mechanical (groundwood) pulp.

### **MECHANICAL (OR GROUNDWOOD) PULP**

Pulp produced by reducing pulpwood logs and chips into their fiber components by the use of mechanical energy, via grinding stones, refiners, etc.

### **POSTCONSUMER FIBER**

Paper, paperboard, and fibrous wastes from retail stores, office buildings, homes, and so forth, after they have passed through their end-usage as a consumer item; and all paper, paperboard, and fibrous wastes that enter and are collected from municipal solid waste.

### **RECOVERED FIBER**

All postconsumer fiber, and manufacturing wastes such as dry paper and paperboard generated after completion of the papermaking process; and repulped finished paper and paperboard from obsolete inventories of paper and paperboard manufacturers, merchants, wholesalers, dealers, printers, converters, or others.
